

Alert for Wireless Devices

Under a new FCC rule, anyone who uses a wireless microphone that operates in the 700 MHz Band must stop operating their wireless microphones (and similar devices) – including theaters, churches, schools, conference centers, theme parks, and musicians – will need to be retuned (where possible) or replace their wireless microphone equipment with other microphone devices no later than June 12, 2010.

The action helps complete an important component of the DTV (digital television) Transition by clearing the 700 MHz band to enable the rollout of communications services for public safety and the deployment of next generation 4G devices for consumers.
